

Peter Lemiszki

Experience

Senior Software Engineer, Security - beehiiv

2025 - Present

- Engineered fraud-detection and risk-scoring pipeline across critical user flows (signup, publish, subscriber import) by integrating third-party services (e-Hawk, Kickbox, HUMAN Security) enabling the platform to automatically flag and block malicious actors in real time, reducing manual moderation workload.
- Expanded an internal security operations console with new domain authentication (DMARC, BIMI) and reputation data (via e-Hawk) integrations, consolidating previously scattered security metrics into a single view for the team..

Software Engineer III - Chariot

2025

- Built a payroll module for calculating employee pay and overtime, increasing the value proposition of the product by enabling users to run their businesses even more efficiently.
- Designed and built a mobile application for entering information and taking photos while offline, enabling users to perform off-site data collection without internet access.

Software Engineer II - Chariot

2022 - 2025

- Introduced UI testing using TestCafe and Jenkins, resulting in fewer production bugs, increased client satisfaction, and greater developer confidence to ship and refactor.
- Technical Lead on app-wide initiative to deprecate automatic saving in favor of a manual process, using reusable React components, to provide a faster, more intuitive user experience.

Software Engineer II - Teachable

2019 - 2022

- Authored new service responsible for course curriculums, along with corresponding React components, as part of a larger initiative to break up Teachable's monolith Rails application.
- Lead project to modernize Teachable's Sales Page creation tool, refactoring legacy code across the stack to improve the UI and add requested features.
- Assisted with backend guild initiatives, on-call responsibilities, interviewing candidates, and onboarding colleagues.

Marketing Pod Technical Lead - Teachable

2016 - 2019

- Rebuilt company website as a fully-responsive CMS using Rails, enabling non-technical employees to manage the site and increasing the efficiency of marketing operations.
- Authored application for hosting in-house webinars via YouTube, using Google Firebase for attendee chat and integrated into Teachable's checkout flow.
- Established team technical norms for 2 subordinates through weekly discussion meetings, regular pairing, and code reviews.

Education

App Academy

2016

- 1000 hour full stack web development bootcamp with less than 3% acceptance rate
- Selected as a top student in cohort to work as a TA for incoming students

New York University

2002 - 2006

- BFA in Film & Television from Tisch School of the Arts
